

國立中興大學104學年度碩士班招生考試試題

科目：工程數學

系所：土木工程學系乙組

本科目可以使用計算機

本科目試題共 / 頁

1. Solve the following ODEs (15%)

(1) $x^2 y'' + 2xy' - 2y = 0$, $y(1) = -1$, $y'(1) = -7$.

(2) $(D^2 - 1)D^3(D^2 + D + 2)y = 0$, $D = \frac{d}{dt}$.

2. Find the Laplace / inverse Laplace transforms (10%)

(1) $L\{\sinh^2 t - t^{1/2}\}$. (2) $L^{-1}\left\{\left(\frac{s-2}{s-3}\right)e^{-\pi s}\right\}$.

3. Consider the vector differential calculus, if

$f = xz - yz$, and $\vec{A} = y^2 \vec{i} + (y^2 - x^2) \vec{j} + 2z^2 \vec{k}$,

then to find : (20%)

(1) $\nabla^2(xz f)$. (2) $\text{div}(\text{grad } f)$.

(3) $\text{curl } \vec{A}$. (4) $\text{grad}(\text{div } \vec{A})$.

4. Find the line integral $I = \int_C 2xy dx + (x^2 - 3y^2) dy$,

where curve C is shown in Fig.1. (10%)

5. Expand $f(x) = x$, $-2 < x < 2$, in a Fourier series. (6%)

6.(1) Solve the following partial differential equation (15%)

$$\frac{\partial^2 u}{\partial t^2} = \frac{\partial^2 u}{\partial x^2} - G \quad (G: \text{acceleration of gravity})$$

with two boundary conditions: $u(0, t) = 0$ and $u(L, t) = 0$,

and two initial conditions: $u(x, 0) = f(x)$ and $u_t(x, 0) = 0$.

(2) Also illustrate the physical meanings of eigen values and eigen functions of this equation. (10%)

7. Evaluate

(1) $\int_{-\infty}^{\infty} \frac{dx}{(x-1)(x^2+3)}$. (8%)

(2) $\oint_{\Gamma} \frac{e^{z^3}}{(z-i)^3} dz$, (6%)

where Γ is a closed path that does not pass through i .

Fig.1.
